

UNIFIED ENDPOINT MANAGEMENT

ThinScale Management Platform

Securing, automating, & simplifying Endpoint Management

As with most environments, efficiency is a huge driver. **The ability to do more at a quicker pace and with less effort** is exactly what central management allows.

It could take days to physically tend to each PC in an environment, manually updating the security policies or applications. ThinScale Management Platform enables large environments with multiple user types and policies **to be deployed in hours, all without having to leave the administrative PC.**

The **ThinScale Management Platform is a centralized management solution that simplifies and enhances** the day-to-day running of endpoint environments, providing complete control, faster deployment time, and ease of administration across your endpoint environment.

The platform accompanies Secure Remote Worker, ThinKiosk, and IntelliPerform.

Role-based administration
