THINSCALE

SECURE 3RD PARTY CONTRACTORS

Enforce a secure, isolated, and IT-managed session

on any 3rd party device running on the Windows OS

If an organization works with 3rd party contractors, whether permanent or seasonal, then its IT team will understand the security challenges associated with giving them access to corporate resources. Typically, IT teams may prefer to issue each 3rd party contractor a corporate device. However, this is costly and may not always be logistically possible or make business sense (especially for short-term contracts).

ThinScale allows IT teams to permit contractors to use their existing Windows device, while still enforcing its standard corporate security posture.

Security compliance

Ensure contractors are working within secure, controlled, and compliant workspaces meeting PCI, HIPAA and GDPR standards

Data leak prevention

USB blocking, write filtering, temporary storage, custom watermarking and more allows ThinScale to eliminate the most common methods of data leakage

Malware prevention

ThinScale provides whitelisting and blacklisting for processes, services, drivers, and more to prevent malicious actors from running silently on personal devices (even if pre-existing)

Cost saving & easy offboarding

ThinScale directly saves the organization money by eliminating logistics with it's centrally deployed software installation. When the contract is concluded this sofware installation is remotely wiped, along with any corporate data and access

Isolated corporate sessions

Enforce a secure, isolated, and IT-managed session on any 3rd party device running on the Windows OS

Complete & cost-effective control over 3rd party devices

Temporary contractor workspaces

The user works within IT-curated & controlled workspaces on their own 3rd party endpoints, while maintaining security compliance standards, the user simply logs out at the end of their working days and are returned to their personal session
5 Transformative benefits from ThinScale

ThinScale works with leading organizations to provide solutions that secure IT operations. The benefits ThinScale can provide your virtual environment are:

1) Working from Anywhere with ThinScale – access workspaces, applications, and IT settings from any device.

2) Efficient management and maintenance of BYOD and Corporate devices all from the ThinScale platform.

3) A single platform delivering certified compliance with PCI, HIPAA, and GDPR standards on the endpoint.

4) Business continuity & disaster continuity by providing cloud-based solutions with offline capability.

5) High-speed deployment & onboarding. ThinScale reduces downtime and increases productivity.
